

New professional functions for fms dispatch centres

Attract and retain drivers and entrepreneurs for the taxi dispatch centre with the "Lineholder" function!

Your fms guide Mike

"Henk is a taxi driver in the Netherlands. He wants to serve his own customers while using the infrastructure of the dispatch center. For that, fms/Austrosoft has a new function called "Lineholder". This function allows Henk to manage his colleagues through a special feature while dispatching the trip of his regular customer only within "his group". Henk's regular customers love this service and the dispatch centre keeps these **"trips with a special service" on its own fms system.**"

This is how it works!
